Email Draft

Subject	EIC Accelerator short proposal - Aureon AI evidence automation platform
----------------	---

Hello,

I am Gary Leckey, director of R&A Consulting and Brokerage Services Ltd. We are preparing Aureon as a candidate deep-tech SME proposition for EIC Accelerator scoping.

Aureon is a local-first evidence automation and AI workflow platform designed to make high-risk operational work more traceable, reviewable, and controllable.

The first fundable package is likely HNC Accountant or Aureon Operator OS, depending on whether the stronger route is SME finance automation or horizontal AI assurance.

I would welcome advice on whether the proposition is mature enough for an EIC short proposal and which evidence gaps must be closed first.

Regards,

Gary Leckey
Director, R&A Consulting and Brokerage Services Ltd

EIC Fit Summary

- SME-led product route with scalable software potential.
- Deep-tech angle is evidence-led AI operations, validation, traceability, and safe handoff.
- Most defensible first packages: HNC Accountant for SME finance automation or Aureon Operator OS for AI assurance workflows.

Key Evidence Gaps

- TRL evidence and demonstrator screenshots.
- Competitor and market map.
- Defensible IP and open-source exposure review.
- Pilot customer or academic validation letter.
- Financial model and scale-up route.

Next Action

- Prepare EIC short proposal first, not a full submission.
- Use Invest NI and academic validation sprint to strengthen evidence before full cut-off.
- Avoid unsupported claims about trading, tax correctness, or AI safety.
