

Aureon Supporting Evidence Pack

Prepared by: Aureon

Applicant: R&A Consulting and Brokerage Services Ltd

Lead: Gary Anthony Leckey

Date: 9 July 2026

Purpose

This document summarises the evidence base behind R&A Consulting and Brokerage Services Ltd's Aureon programme. It is designed for grant applications, adviser reviews, partner discussions, and due-diligence requests.

Aureon is the evidence and workflow operating layer used by R&A Consulting to organise research assets, software repositories, validation material, and project evidence into structured, source-grounded grant submissions.

Applicant Profile

Field	Evidence
Legal entity	R&A Consulting and Brokerage Services Ltd
Company number	NI696693
Registered office	1 Quadrant Place, Belfast, Northern Ireland, BT12 4HX
Lead	Gary Anthony Leckey
Primary email	gaxlec@gmail.com
Research brand	Aureon Institute
Public software route	RA-CONSULTING / Aureon repositories and local Aureon software corpus

Programme Summary

The Aureon programme develops local-first evidence automation for AI-assisted research, SME operations, and grant-ready technical reporting. The work combines:

- source indexing and claim-to-evidence mapping;
- reproducible workflow records;
- software and research corpus organisation;
- human review and approval controls;
- privacy-aware exclusion of sensitive material;
- formal evidence packs for funders, advisers, partners, and customers.

The programme is being positioned across three fundable lines:

- **Aureon Evidence OS for AI-driven scientific discovery**

Research workflow tooling for source classification, reproducible experiments, evidence routing, coherence scoring, and open technical reporting.

- **Aureon Evidence Studio for Createch AI workflows**

A commercial prototype for advertising, marketing, and creative technology teams that need clear proof of source use, review status, approvals, and reuse boundaries.

- **Aureon evidence automation for SME operations**

Practical evidence workflows for compliance, warehouse and stock records, back-office automation, grant reporting, and repeatable business documentation.

Evidence Categories

Category	Current evidence	Grant use
Company identity	Companies House record for NI696693; R&A Consulting registered in Northern Ireland	Applicant eligibility and due diligence
Software corpus	Local Aureon repositories, workflow scripts, evidence registers, project ledgers, generated packs	Product and technical capability evidence
Research corpus	HNC, PEFC, EPAS, signal-processing and AI workflow research outputs	Scientific-discovery and validation-route evidence
Operational evidence	Submitted grant records, pipeline reports, project plans, risk registers, Drive packages	Delivery discipline and audit trail
Public profile evidence	GitHub, ResearchGate, ORCID, Academia.edu and related public records where verified	Research identity and dissemination
Sensitive records	Finance, tax, private communications, credentials, private datasets	Excluded from external packs unless specifically requested and reviewed

Current Grant Activity

Route	Current position	Evidence available
AIRR AI Open Access	Submitted compute-access proposal for Aureon Evidence OS	Proposal text, compute plan, public-data and reproducibility plan
Innovate UK Next Wave	Submitted IFS application 10209601 for Aureon Evidence Studio	Submitted answers, project plan appendix, risk register appendix, submission confirmation
InterTradeIreland Innovation Boost	Enquiry submitted for advisory route	Enquiry record and follow-up path
Future Leaders Fellowships Round 11	Evidence pack prepared for business/non-academic route	Candidate profile, programme plan, work packages, budget frame
EIC Accelerator Step 1	Preparation route only	Short proposal, pitch outline, evidence requirements

Capability Evidence

The Aureon software and research corpus demonstrates a sustained body of work in evidence automation, AI-assisted workflow control, source-led reporting, and local-first technical operations. The strongest grant-ready capabilities are:

- structured evidence ingestion and classification;
- source-grounded report generation;
- privacy-aware separation of sensitive and public material;
- workflow audit trails;
- local repository and Drive-based evidence preservation;
- repeatable project pack generation;
- validation planning and risk register creation.

Research Positioning

Aureon research outputs are used as authored research material and testable hypotheses. They are not presented as independently validated scientific outcomes unless independent validation exists.

For scientific-discovery routes, HNC and related work are positioned as algorithmic design hypotheses for coherence scoring, signal analysis, evidence routing, and reproducibility experiments. This allows the programme to pursue ambitious research while keeping claims bounded, testable, and funder-safe.

Governance And Data Handling

External grant packs are prepared from public, owned, licensed, or sanitised material. Private financial records, credentials, private emails, personal files, customer records, and unreviewed sensitive data are excluded from funder attachments by default.

Each external evidence pack should include:

- applicant identity;
- project scope;
- evidence source list;
- validation plan;
- delivery plan;
- responsible data handling statement;
- budget and partner assumptions where applicable.

Attachment Guidance

For funder-facing submissions, attach the polished evidence summary relevant to the competition and any requested appendices. Use application-specific appendices where they are requested by the funder or adviser.
