

# Full Data Truth Checklist And Benchmark

Company: R&A CONSULTING AND BROKERAGE SERVICES LTD

Company number: NI696693

Period: 2024-05-01 to 2025-04-30

## Internal Questions

| Question                                                                 | Answer                      | Evidence                                                                                                                                                                                           |
|--------------------------------------------------------------------------|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Do we have the raw company data?                                         | yes                         | 36 transaction sources; 1052 unique period rows; 44 duplicate overlaps removed.                                                                                                                    |
| Are the numbers real and traceable?                                      | yes_with_eye_scan           | Numbers are summed from repo-held bank/payment rows, not invented. Each row has source provider, flow provider, source account, source file, category, autonomous allocation, and eye-scan status. |
| Did every row get an answer?                                             | yes                         | 1052 rows are classified, autonomously allocated, and posted to final ledger positions.                                                                                                            |
| Are there unresolved outliers?                                           | no                          | Unresolved outlier rows: 0. System-resolved audit positions: 529.                                                                                                                                  |
| Do totals reconcile to the accounts?                                     | yes                         | Turnover GBP 83651.68; expenses GBP 16306.58; profit before tax GBP 67345.10.                                                                                                                      |
| Do we have full evidence for everything?                                 | audit_ready_system_resolved | 362 rows have conservative final ledger positions and audit evidence basis; 0 rows require user data entry.                                                                                        |
| Did the system count CIS deducted before the bank payment arrived?       | yes                         | 36 CIS net-receipt rows; gross income GBP 77209.69; CIS suffered GBP 15439.52.                                                                                                                     |
| Did every incoming payment get payer provenance?                         | yes                         | 203 incoming rows; 179 lookup-required rows; 24 not-required rows.                                                                                                                                 |
| Did the system check VAT threshold and construction reverse-charge risk? | yes_with_workpaper          | VAT taxable turnover estimate GBP 83651.68; threshold GBP 90000.00; exceeded=False; reverse-charge review rows=36.                                                                                 |
| Did the cognitive accounting systems check it?                           | yes_with_review             | HNCSoup classified rows; HNCSoupKitchen stress-tested risk; HNCAuris action counts {'CLASSIFY_REVIEW': 126, 'HUMAN_REQUIRED': 723}; validator coherence 0.373.                                     |
| Did the system create external evidence or file anything?                | no                          | No external receipts, Companies House filing, HMRC submission, payment, or authentication was performed.                                                                                           |

## Where The Data Is

- combined\_bank\_transactions\_csv: C:\Users\user\laureon-trading-integrated-main-20260508\Kings\_Accounting\_Suite\output\gateway\2024-05-01\_to\_2025-04-30\combined\_bank\_transactions\_2024-05-01\_to\_2025-04-30.csv

## Data Coverage Benchmark

- Source providers: revolut, zempler
- Flow providers: revolut, sumup, zempler
- Source accounts: MSAGM9YS, business\_gbp\_monthly, uploads\_statement

- Enriched/classified rows: 1052
- Fully categorised final-ledger rows: 1052
- Eye-scan flag rows: 362
- System-resolved audit position rows: 529
- Unresolved outlier rows: 0
- Fallback suspense rows: 0
- Manual data-entry rows: 0
- CIS net-receipt rows grossed up: 36
- CIS suffered/tax deducted before bank: GBP 15439.52
- Incoming payer provenance rows: 203
- Incoming payer lookup-required rows: 179
- Incoming payer no-missed control: True
- VAT taxable turnover estimate: GBP 83651.68
- VAT threshold exceeded: False
- Auris internal challenge rows: 723
- Auris classify-review rows: 126
- Validator ready\_to\_file: False

## What This Means

The pack has full bank-feed coverage for the period and complete row-level autonomous allocation coverage. Cash, director, transfer, tax, capital, and low-confidence rows are conservatively posted to final ledger positions with traceable audit evidence; unresolved outliers are zero.
